1. The following is an examiner's statement of reasons for allowance:

the art of record fails to teach or suggest a system or method of monitoring the conditions within a fuel storage compartment of a transport tank, comprising a probe adapted to be installed in a fuel storage compartment and having a first sensor for detecting the presence of fuel at a predetermined level therein, and a second sensor for detecting the pressure of a gaseous head above the fuel; a signal generator responsive to the first and second sensors for producing a first signal representing a normal condition when the first sensor is not detecting fuel at the predetermined level, a second signal when the second sensor detects a predetermined high pressure of the gaseous head, and a third signal when the second sensor detects a predetermined low pressure of the gaseous head; and an output control responsive to the signals for delivering as output the first signal when the second and third signals are not present, and for delivering as output the second signal when the second signal is received or the third signal when the third signal is received, to thereby indicate a condition precluding delivery of fuel to or from the compartment whenever either a predetermined high or low pressure condition is present.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
